

# Carbohydrate Polymers

**A Journal Devoted to Scientific and Technological Aspects of Industrially Relevant Polysaccharides**

*Carbohydrate Polymers* covers the study and exploitation of carbohydrate polymers which have current or potential industrial application in areas such as food, textiles, paper, wood, adhesives, biodegradables, biorefining, pharmaceuticals, and oil recovery.

Topics include:

- studies of structure and properties
- biological and industrial development
- analytical methods
- chemical and microbiological modifications
- interactions with other materials

The role of the carbohydrate polymer must be central to the work reported, not peripheral. At least one named carbohydrate polymer must be mentioned in the paper. Research must be innovative and advance scientific knowledge.

## Types of paper

**Original full-length research papers** should contain material that has not been previously published elsewhere, except in a preliminary form. These papers should not exceed 6000 words of text and generally not more than eight figures/tables.

**Review papers** will be accepted in areas of topical interest and will normally emphasize literature published over the previous five years. They should not exceed 12,000 words plus figures, tables and references.

**Topical short reviews** focus on promising areas of polysaccharide research that are advancing rapidly or in need of re-review in the light of recent progress in the underlying sciences or changing priorities. More concise than conventional reviews, they should focus on the latest developments, their potential industrial applications and future research needs. They should not exceed 5,000 words plus figures, tables and references.

## Contact details for submission

Contributors must submit their articles electronically via the Elsevier Editorial System  <http://ees.elsevier.com/carbpol>. This is the only method of submission, and facilitates processing of your article.

Please choose "**EPNOE Polysaccharide**" as your article type.
